Case Study (ISO 9241-210)

Objective:

To analyze and apply the I**SO 9241-210 Human-Centered Design (HCD)** framework by evaluating an existing system that is **related or similar to your proposed project.**

This case study helps you understand how the ISO standard is applied in real-world contexts and how you can adopt these principles in your own system design.

INSTRUCTIONS

▼ Select a Reference System

Choose an existing application, website, kiosk, or platform that closely relates to your proposed Terminal project.

- The chosen system should serve as a benchmark or comparison point for your own design.
- Example

- If your proposed project is an *Online Appointment Scheduling System*, you may analyze **MyHealth App, KonsultaMD, or Google Calendar.**
- If your project is an *E-Learning Management System*, you might review **Google Classroom, Canvas, or Coursera.**

▼ Conduct a Human-Centered Design (HCD) Evaluation

Analyze the system using the ISO 9241-210 framework. Focus on user participation, usability, context of use, and iterative design.

💡 **Important:**
You must use the **official ISO 9241-210 checklist** as your **assessment tool.**

- This checklist can be found **inside the provided ISO 9241-210 document** distributed in your course materials.
- Copy or extract the relevant checklist items from that document and use them as the **basis of your analysis and evaluation.**
- Each checklist item should be answered based on your selected system, supported by observations and examples.

▼ Case Study Report Content

Your written report must include the following sections:

A. System Overview

- Describe the system, its main purpose, and its target users.
- Explain how it relates or connects to your proposed project.

B. Identified Users and Context of Use

- Identify the users (primary and secondary).
- Describe how, where, and when they use the system.
- Discuss the devices, environment, and conditions influencing their interaction.

C. Usability Strengths and Issues

- Identify what the system does well in terms of usability, accessibility, and interaction.
- Describe observed or potential usability problems or pain points.

D. Evaluation Using ISO 9241-210 documents

- Copy and use the checklist provided in the ISO 9241-210 document.
- Evaluate the chosen system by marking or commenting on each relevant checklist item.
- Summarize your findings in paragraph form (1–2 pages) describing how well the system adheres to HCD principles.

E. Recommendations for Improvement

- Propose enhancements or design modifications based on your checklist findings.
- Link your recommendations to lessons you will apply in your own proposed system design.

F. References and Appendices

- Include screenshots, annotated visuals, or flow diagrams.
- Cite any references or system sources used in your analysis.

Presentation Requirements (use Figma Slide)

- Present your case study in class (5–7 minutes per group).
- Use slides or visuals that summarize your key findings and recommendations.
- Focus on how the system aligns or fails to align with ISO 9241-210 principles.
- Highlight insights or takeaways that will influence the design of your own project.

Submission Requirements

- Submit a 2–3 page written summary in PDF format.
- Attach your completed ISO 9241-210 checklist (from the provided document).
- Include relevant visuals or references as appendices.

Rubric

CRITERIA	POINTS
Relevance of chosen system to proposed project	15
Proper use of ISO 9241-210 checklist as evaluation tool	25
Depth and accuracy of analysis	25
Quality of recommendations and connection to proposed system	20

Clarity, organization, and presentation delivery	15
